

Which property of the CoreDataStack object should be used to execute a fetch request?

```
CoreDataStack *cdStack;
```

- a. `cdStack.dataModel`
- b. `cdStack.managedObjectContext`
- c. `cdStack.persistentStoreCoordinator`

b

What object is equivalent to a CoreData entity?

a model object (the M in MVC)

How should these two entities relate  
and what should be the names of  
those relationships?
