

Which cell type provides two labels,  
one on the left and one on the right?

- a. Basic
- b. Right Detail
- c. Left Detail
- d. Subtitle

How would you iterate over each element  
in the array below?

```
NSArray *students = @[@"Richard", @"Keaton", @"Joe",  
    @"Jordan", @"Jim", @"Randall"];
```

(I'm looking for a "for" loop conditional)

```
for(NSString *aStudent in students)
```

Using the model object and label below, how would you set the label using the model objects name attribute?

GroceryItem \*anItem  
(contains 3 attributes: name, category and aisle)

```
UILabel *aLabel = [[UILabel alloc] init];
```

```
aLabel.text = anItem.name;
```
