

To run setup code when an app has been “re-awoken” by the user, which method in the AppDelegate would you use?

- a. – (void)applicationWillResignActive:(UIApplication *)application
- b. – (void)applicationDidEnterBackground:(UIApplication *)application
- c. – (void)applicationWillEnterForeground:(UIApplication *)application
- d. – (void)applicationDidBecomeActive:(UIApplication *)application

C

Two view controllers interact. VC1 & VC2.
VC2 has data to share with VC1. Which
class needs to implement the
<customdelegate> protocol?

- a. @interface ViewController1 : UIViewController <customdelegate>
- b. @interface ViewController2 : UIViewController <customdelegate>

a

To use MKAnnotation in my class,
what needs to be done first?

```
@import MapKit;
```
