

Convert the string into an NSURL object.

```
NSString * urlString = [NSString stringWithFormat:@"https://  
    api.github.com/users/%@", username];  
NSURL *url = [...];
```

```
[NSURL URLWithString:urlString];
```

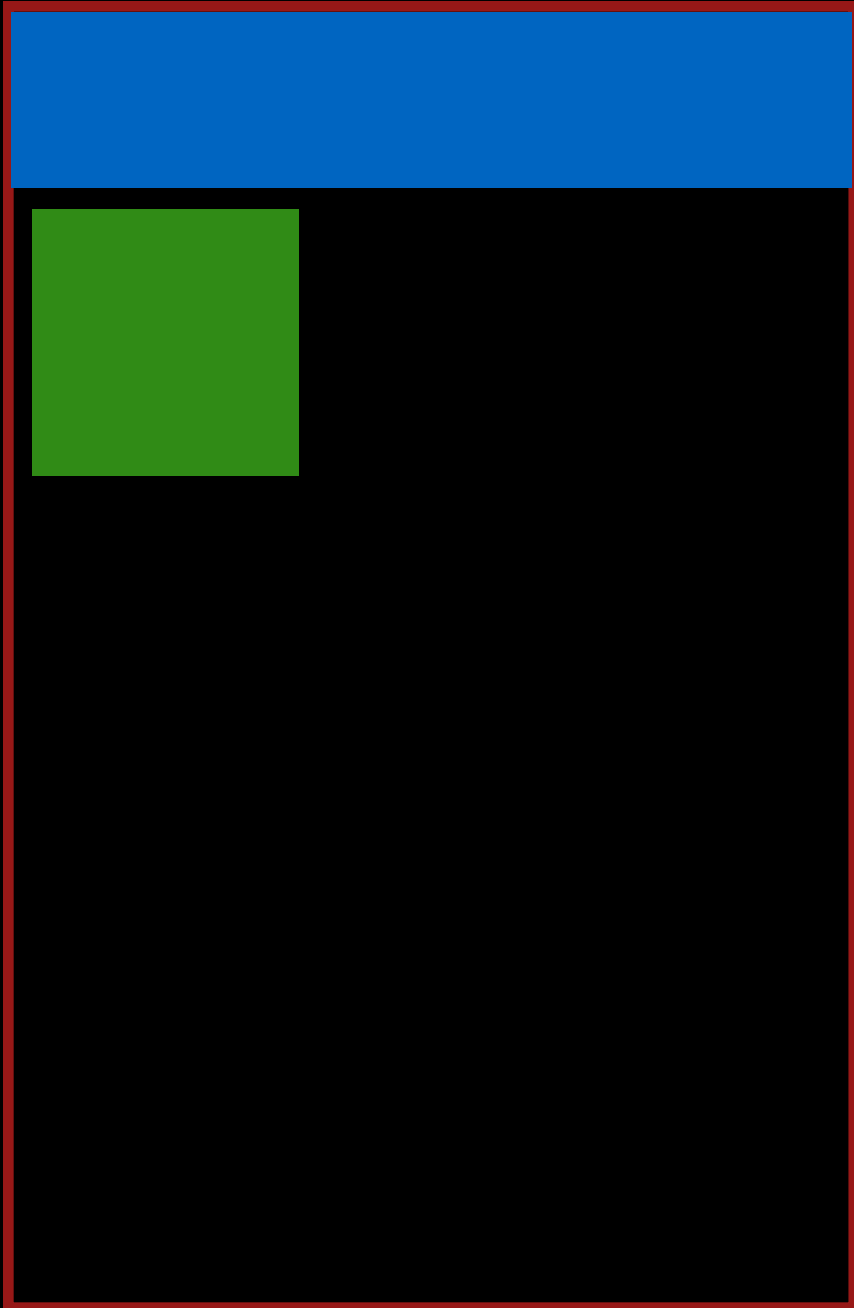

Based on the JSON, what kind of object would be returned?

```
[
  {
    "name": "Nyota Uhura",
    "title": "Chief Communications Officer",
    "rank": "Lieutenant"
  },
  {
    "name": "Montgomery Scott",
    "title": "Chief Engineer",
    "rank": "Lieutenant Commander"
  }
]
```

```
... = [NSJSONSerialization JSONObjectWithData:responseData
                                           options:NSJSONReadingMutableContainers
                                           error:nil];
```

NSArray of NSDictionary

Place the greenView on the screen using CGRectMake
(blue bar is the navbar)

```
CGRectMake(10, 74, 100, 100)
```
